

**English.**

**Please read the instructions in their entirety before the installation and observe all of the instructions!**

**Checking:**

**Note.** Please take off the protective film (if existing) immediately after unpacking the item and check the entry slip for any transport damage. Please contact us directly, should there be any FAULTS. If the article is installed irrespective of this, no liability shall be accepted in regards to the damage.

**Please check the fit before installing it; the entry slip should only be installed, once you are satisfied! Should you decide to install slips, which do not fit correctly, these cannot be taken back!**

**Installation preparation:**

**Cleaning.** Clean the installation points thoroughly and remove any varnish protector substances, dirt, wax or similar particles. Please note that some cleaning substances may contain fats, silicones or lead, these substances could reduce the adhesive power.

**Inspection.** Make sure that you have all of the tools and resources at hand, which you require, check the fit and installation position one more time. You should only begin the installation, if you have everything that you need and if the entry slip fits, in any other case you should contact us.

**Installation:**

- 1.** The already thoroughly cleaned installation points should be cleaned one more time with the included cloth. Please do not continue with the installation, should the cloth be missing, and contact us.
- 2.** Please do NOT remove the adhesive tape protection in step two.
- 3.** Last check, please pay attention to achieving exactly the right position. It is essential for the entry slip to be installed precisely in the correct position, otherwise the fit cannot be ensured. Should the fit not be right, please try to move the entry slips forward and backward slightly (many door sills are not even).
- 4.** Use markings, in order to avoid missing the installation point.
- 5.** Now remove the adhesive tape protection. Continue to install the entry slip directly. Do not put down the entry slip with unprotected adhesive tape!
- 6.** Attach the entry slip to the marked point. We recommend to first attach the entry slip at the top and then to work towards the bottom in a controlled manner. Here, it is, however, all down to individual technique.
- 7.** Have a second person support you, should you require assistance! Should you feel that the installation instructions do not contain sufficient information, please do not install the entry sill but contact us instead.
